NEW ENGLAND REGIONAL SPINAL CORD INJURY CENTER

A Network of Model SCI Care

NEWTON PAVILION

THE NEW ENGLAND REGIONAL SPINAL CORD INJURY CENTER

A NETWORK OF MODEL SYSTEMS CENTER CARE

The New England Regional Spinal Cord Injury Center is a network of rehabilitation facilities in New England that includes the Center for Rehabilitation at Boston Medical Center in Boston, MA, and Gaylord Hospital in Wallingford, CT. Northeast Rehabilitation Hospital in Salem, NH, is an affiliated facility contributing to our clinical and research activities.

Sharing in a dedication to quality care for individuals with spinal cord injury, these facilities have developed the New England Standard of Care for Spinal Cord Injury; this means that we have developed a common set of standards so that patients will receive the same level of comprehensive, quality care at each of these facilities. The New England Regional Spinal Cord Injury Center Network has enhanced learning opportunities for clinicians and created a consistent, proven treatment plan for patients. Our patients can rest assured they are receiving the highest level of care available.

To achieve the designation of Model Systems Center, facilities must meet established criteria such as providing comprehensive services from the time of injury throughout the lifespan, offer evidence based therapeutic interventions and services, and see a pre-determined amount of patients with spinal cord injury each year.

A physiatrist, experienced in spinal cord injury rehabilitation, leads the rehabilitation team of physical, occupational, and speech therapists, certified rehabilitation nurses, respiratory therapists, and therapeutic recreational therapists. Patients and families within the New England Regional Spinal Cord Injury Center Network

will also benefit from a full spectrum of support services including social work, case management, rehabilitation psychology, peer mentoring, and community integration.

Upon discharge from rehabilitation, patients within the Network will receive comprehensive care for the specific needs of individuals with spinal cord

injury throughout their lifespan.

The New England Regional Spinal Cord Injury Center Network is one of 12-Model System Centers across the United States working together to demonstrate improved care, maintain a national database, participate in independent and collaborative research and provide continuing education relating to spinal cord injury.
