WHAT IS THE BIVALENT COVID-19 VACCINE BOOSTER DOSE?

A bivalent vaccine contains two different strains of a virus - so the bivalent COVID-19 booster includes:

- parts of the **original** virus strain
- parts of the **Omicron** variant

The updated booster dose will give you increased and broad protection against COVID-19, including against Omicron.

AM I ELIGIBLE TO RECEIVE THE UPDATED BOOSTER?

You are eligible to receive the updated bivalent booster if:

- You've already completed the primary series
- Two months have passed since your last dose
- You are over the age of 5 (Pfizer) or 6 (Moderna)

Providers are only offering the updated booster! If you have an appointment to receive a booster, it is the bivalent booster!
