

The ED leadership will notify registration of any patient being screened in the tent

If possible, demographic information will be collected by phone prior to the patient arrival for preregistration by patient access staff. Create a patient expect and print labels if existing MRN is found or we have the demographics

If demographics are not available prior to arrival, staff in PPE inside the tent will collect patient information using the Quick Demo sheet on the WOW. Hospital provided cellphones can also be used to speak directly to the patient in the tent or in a car.

If patient roomed, register using RN intercom system from UC desk

Do not touch any paperwork without gloves

Throw out all paper work in a PHI bin provided near the tent
